Lead Machinist

Job Description

Well established steel fabrication company is looking for an experienced Working Lead Machinist to perform machining for a variety of jobs. The ideal candidate will have a strong background in machining and have the drive, and skill to be an exceptional addition to our team.

Requirements

- Min. 6 years experience (4 years lead experience and steel fabrication background preferred)
- Compliance with our strict quality assurance program is required, as well as proactively maintain all tools and equipment used, and follow all safety precautions.
- Strong communication skills necessary as this position will collaborate with other team members to work within the production schedule.
- Ideal candidate will be energetic, dependable, have a great work ethic and ability to work at a fast pace, as run quantities vary by project and could be 1 part, or 100 parts.
- Steel Toed Boots and a Pre-employment drug screen are mandatory.

Responsibilities include:

- Read blueprints and take or read measurements to plan layout procedures. Determine the appropriate machine(s) and tools needed to perform progressive machining operations as required.
- Program and optimize the sequence of operations according to blueprints and specifications.
- Operate multiple types of machines involving exacting tolerances. Determine cutting tools to be used and methods of holding and aligning work.
- Operate/setting up CNC Mills/Lathes.
- Ensure conformance to specifications.
- Following all safety procedures.
- This is a *Working Lead* position, so compliance with all Quality Assurance and Safety Protocols are necessary to set a good example.
- Responsibilities include other duties as assigned.

Job Type: Full-time

Mon-Fri 7:00 am - 3:30pm. This is a full-time 1st shift position, but must be flexible to work overtime when needed depending on project demands.

There are great benefits available, including medical insurance, vacation pay and 401K.
